Software Development Skills Front-End, Online course

Lauri Metso, 001830884

LEARNING DIARY, FRONT-END MODULE

Date : 24.2.2026

Activity : Video lecture, coding

Learning outcome: Set up environment, refreshed my memory on HTML with lectures part 1 and part 2.

Date : 25.2.2026

Activity : Video lecture

Learning outcome: Set up navbar and basic css

Date: 27.2.2026

Activity: Video lecture

Learning outcome: Set up buttons and utility classes

Date: 2.3.2026

Activity: Video lecture

Learning outcome: Went more in-depth on css and continued working on the task list

24.2.2026

Checked the general information of the course and went through the requirements. Chose the frontend module because it was the most interesting to me. Set up my environment with git and VScode. I watched some of the HTML lectures, which refreshed my memory of it.

25.2.2026

Did first commit and worked on the navbar. Continued the 2-hour video.

27.2.2026

Continued the vid and made second commit, added elements and css.

2.3.2026

Continued the video and tasklist and made third commit. Made more elements and expanded css a lot.

18.5.2026

Been a while, something came up in my personal life. Continued the CSS part. Corrected the video section in index.html and added .video-wrapper rules to center the iframe. Made some background css and html. Added testimonials section and pricing plan section.

Also did the FAQ html, css and javascript. Made a footer.

Had enough time to finish the whole video, committed to git.

18.5.2026

Started the project. I came up with this idea of a portfolio site that looks like it had been made with MS paint. I started by changing the website colours to pastel colours and the font to comic sans. I Also added a wobble to the text to make it more interesting. I added an underline effect on all links, which looks nice. I got rid of the video section and replaced it with 3 project boxes which I will fill with my projects' details later on.

19.5.2026

Continued the project. Filled the project boxes and linked github and gitlab on them. Redid the navbar. Added a constant wobble effect on some of the site to make it look more interesting. Replaced the testimonials with a skills section and replaced the faq with a simple email address. Made the hamburger menu better and smoothed the mobile interface

overall. Simplified the footer to reflect the site. I think there is some unused code but I don't think that matters too much.

Cleaned up the unused code. Deployed site with github pages, made a simple README.
